GPA: 3.15/4.3(major: Artificial Intelligence) website: `jushcooly.github.io`

Summary

I am **a student at Yonsei University** who is interested in **medical AI and computer vision and machine learning** and is studying related development and research.

Interested in

Computer vision- accurate and fast medical diagnosis and precise treatment
Reinforcement Learning - I became interested in reinforcement learning because it enables AI models to develop creativity through innovative training methods.

Education

YeongIl Highschool(in pohang) 2019 – 2021

Yonsei University(Senior) 2022-

Medical leave of absence for leg-related health reasons and returned. 2023-2024

Club Activity

Kakao MODU Scholarship Program 2025

- Selected as a nationwide Kakao MODU scholarship recipient for students with disabilities in science and engineering, and participated in various activities related to career planning.

Morgorithm 2024.03-2025.02

- Interested in PS, I learned about and analyzed algorithms by solving problems that appeared in competition(ICPC)s with other members

Liberal arts 2025-

- Interested in philosophy and engaged in discussions with club members on various philosophical ideas and contemporary social issues.

Personal Activities

Deep learning From Scratch 1,2 2022.07-2022.08

- Studying to build **basic knowledge related to deep learning**. Through this activity, I also learned about various functions related to Python, including numpy.

CS229-Andrew Ng(2018-autumn)-on youtube 2024.06-2024.07

- I was curious about the **applications of machine learning**, so I listened to the lecture on YouTube. Solve problem sets with others, share solution methods, and analyze problems.

Algorithmic Problem Solving Strategies 2024.01-2024.09

- I learned about the **principles behind each algorithm**, what situations they are **actually used in**, and **how to use them efficiently.**

Reinforcement Learning and AI Systems Study Group 2024-2025, 2025.05-2025.08

- Recognized the need to deepen my understanding of both subjects and organized a study group through mentoring, focusing on reinforcement learning and AI system fundamentals.

Learning CNN from Core principles to practical 2026.01-2026.02

- Review the basics of CNN and learn various related techniques

Deep Learning(CNN) perfect guide with pytorch 2026.01-2026.02

- Learned by implementing various PyTorch settings and structures such as CutMix, data augmentation, AlexNet, VGG, GoogleNet, and ResNet 50.

Building transformers from Scratch 2026.02-2026.03

- Learned by implementing transform theory, BERT, positional embedding, MarianMT, encoder, and decoder structures.

self-moving pacman project 2026.02-2026.04

- Based on the basic Pac-Man, an AI was created that automatically achieves high scores by utilizing various reinforcement learning techniques and game-appropriate ideas.

Technologies

Languages: Korean(native),English(TOEIC: listening and writing: 820)

Computer Languages: C++, python

Technologies: tenserflow, numpy, pandas, basic algorithm
