SUMMARY

Senior AI undergraduate at Yonsei University. My interest centers on reinforcement learning and how it lets models learn creative, adaptive behavior. Having navigated physical mobility challenges firsthand, I bring a grounded, physical-therapy-informed perspective that I aim to carry into my research.

INTERESTS

Reinforcement Learning — Drawn to how reinforcement learning lets models discover novel, creative behaviors through the way they are trained.

EDUCATION

Yonsei University (Senior)	2022 –
YeongIl High School (Pohang)	2019 – 2021

RESEARCH EXPERIENCE

Yonsei University Visual AI Lab — Research Intern	2026.06 – 2026.09.16
Advised by Prof. Haegon Jeon	
Social LSTM discussion: Investigated, at the code level, a baseline model's unexplained high performance and traced it to sampling bias in the evaluation stage — a discrepancy the team had left unresolved for weeks. SingularTrajectory study: Replaced the model's diffusion-based refinement step with a lightweight MLP, achieving a 4x inference speedup with no loss in accuracy. PANDA dataset construction: Identified the filming site of a Chinese dataset without Google Maps access by reverse-tracing the authors' affiliation to Tsinghua University's Shenzhen campus and matching landmarks and terrain in the footage, pinpointing a location senior members had been unable to find.	

CLUB ACTIVITY

Kakao MODU Scholarship Program	2025
Selected as a nationwide scholarship recipient among science and engineering students with disabilities, taking part in structured career-planning activities.	
Morgorithm	2024.03 – 2025.02
Studied and analyzed algorithms with fellow members, working through competition-style (ICPC) problems.	
Liberal Arts	2025 –
Engaged in discussions on philosophical ideas and contemporary social issues with club members.	

PERSONAL ACTIVITIES

Deep Learning From Scratch 1, 2	2022.07 – 2022.08
Built foundational deep-learning knowledge and gained familiarity with core Python libraries, including numpy.	
CS229 — Andrew Ng (2018 Autumn, YouTube)	2024.06 – 2024.07
Followed the full lecture series on machine learning, solving problem sets and discussing approaches with peers.	
Algorithmic Problem Solving Strategies	2024.01 – 2024.09
Studied the principles behind core algorithms, their practical use cases, and how to apply them efficiently.	
Reinforcement Learning and AI Systems Study Group	2024 – 2025, 2025.05 – 2025.08
Organized and mentored a peer study group covering reinforcement learning and AI-system fundamentals.	
Learning CNN from Core Principles to Practice	2026.01 – 2026.02
Reviewed CNN fundamentals and a range of related techniques.	
Deep Learning (CNN) Perfect Guide with PyTorch	2026.01 – 2026.02
Implemented key architectures and techniques in PyTorch, including CutMix, data augmentation, AlexNet, VGG, GoogLeNet, and ResNet-50.	
Building Transformers from Scratch	2026.02 – 2026.03
Implemented Transformer components from the ground up, including BERT, positional embeddings, MarianMT, and encoder/decoder structures.	
Self-Moving Pac-Man Project	2026.02 – 2026.04
Built an agent that autonomously achieves high scores in Pac-Man using reinforcement learning techniques and game-specific strategies.	

TECHNOLOGIES

Languages:	Korean (native), English (TOEIC L&W: 820)
Programming:	C++, Python
Frameworks / Tools:	TensorFlow, numpy, pandas, basic algorithms
